Liberty DR

Rugged. Mobile. Digital.

VERSATILE

Enhance productivity and improve clinical workflow with the Liberty DR wireless detector and wireless communication with HIS/RIS/PACS systems. The Liberty DR software has an intuitive, easy-to-use graphical interface that will have users acquiring and sending images within minutes of first use.

Manage your fleet of portables by transferring the Liberty DR kit between them in less than 10 minutes. One cart upgraded with Liberty DR can do the work of two standard OEM portables. The laptop is detachable so you can bring it with you in to the house or front of the vehicle.

Additionally, the Liberty DR can be separated into two components to allow users to easily move the product in and out of the vehicle.

No tethered cables

No scanning CR cassettes

No film processing

ECONOMICAL

The Liberty DR is a very cost effective solution that enables you to upgrade an existing system or purchase an entire mobile DR solution. An upgrade of your existing MinXray takes less than 10 minutes and we know you will be satisfied with either solution.

PORTABLE

A wireless or tethered flat panel detector transmits images to the system for immediate viewing and manipulation. The Liberty DR portable solution is a compact, self-contained solution, with no moving parts to service.

Streamline Workflow. Images in seconds. Wireless Transmission.
